DATE MAILED: 06/13/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	10/500,526	RICKARDS, ROBERT FRANCIS	
	Examiner	Art Unit	
	Gwendolyn Baxter	3632	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06 March 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-7 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-7 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

This is the second office action for application serial number 10/500,526, Book Reading Aid filed June 30, 2004.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3-6 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 3,674,231 to Lewis. The present invention reads on Lewis as follows: Lewis teaches a device including an elongate member (10'), end-pieces (23, 24), and a spring element (30). The elongate member is for spanning and supporting the cover or an open book (20). The elongated member has arms (14', 15') projecting from opposite ends. The end-pieces are formed as separate components having pivotal connections (near 28) with the arms, whereby the end-pieces are mounted to move pivotally relative to the elongate member. The end-pieces include finger portions (near 27) directed inwardly towards each other at opposite ends of the elongate member. Lever portions (near 30) project outwardly to the opposite side of the respective pivotal connection, wherein the finger and lever portions together are generally in the shape of a plane which has been curved in one dimension. Each of the end-pieces is provided with a respective spring element (30) having an end, which bears against the end-piece to urge the respective finger portion towards the elongate member to press against the

Art Unit: 3632

pages of the open book. Each spring element has an end, which bears against the respective arm. The finger and lever portions are in the form of a curved strip, which extends towards the opposite end-piece. Each end-piece includes a pair of spaced walls (28). An end of each finger portion has a substantially straight margin, which extends substantially parallel to the axis of the pivotal connection. The end of the finger portion is arcuately curved in a plane, which is normal to its length. The elongate member includes inner and outer telescopically engaged elements (the portion of 14', 15' received in 10') whereby the distance between the end-pieces can be adjusted. The elongate member includes a platform element (the top surface of the 10').

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 3,061,969 to Lunday in view of U.S. Patent No. 3,674,231 to Lewis. Lunday teaches a device including an elongate member (10, 11), end-pieces (30, 30a), and a spring element (33). The elongate member is for spanning and supporting the cover or an open book (50). The elongated member has arms (31, 31a) projecting from opposite ends. The end-pieces are formed as separate components having pivotal connections (not numbered) with the arms, whereby the end-pieces are mounted to move pivotally

Art Unit: 3632

relative to the elongate member. The end-pieces include finger portions (the portion of 30, 30a that directly contacts the book) directed inwardly towards each other at opposite ends of the elongate member. Lever portions (near 30 and 30a) project outwardly to the opposite side of the respective pivotal connection, wherein the finger and lever portions together are generally in the shape of a plane which has been curved in one dimension. Each of the end-pieces is provided with a respective spring element (33) having an end, which bears against the end-piece to urge the respective finger portion towards the elongate member to press against the pages of the open book. Each spring element has an end, which bears against the respective arm. The finger and lever portions are in the form of a curved strip, which extends towards the opposite end-piece. Each end-piece includes a pair of spaced walls (located on the exterior of each side of the spring) and each spring element is in the form of a coil spring mounted on a pivot pin extending between the pair of spaced walls to pivotally secure the end-piece to the respective arm. An end of each finger portion has a substantially straight margin, which extends substantially parallel to the axis of the pivotal connection. The end of the finger portion is arcuately curved in a plane, which is normal to its length. The elongate member includes inner and outer telescopically engaged elements (25, 25a) whereby the distance between the end-pieces can be adjusted. The elongate member includes a platform element (11) and an underside of the platform is provided with means (10) for engagement with the outer telescopically engaged element. Although the arms are taught to be angularly disposed with respect to the elongated member, Lunday fails to teach the arms projecting inwardly.

Art Unit: 3632

Lewis teaches a device comprising an elongate member (10) having arms (14', 15') projecting from opposite ends, end-pieces (23, 24) having pivotal connections (near 28). Each end piece is provided with a respective spring element (30). The spring element has an end that bears against the end piece to urge the respective finger portion towards the elongate member to press against the pages of the open book. The arms are angularly disposed with respect to the elongate member projecting inwardly. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the arms as taught by Lunday to have incorporated the arms being projected inwardly as taught by Lewis for the purpose of readily engaging or disengaging books of various sizes.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gwendolyn Baxter whose telephone number is 571-272-6814. The examiner can normally be reached on Monday-Wednesday, 8:00am - 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's acting supervisor, Kimberly Wood can be reached on 571-272-6826. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
